Generated 2026-09-10 11:43 UTC

**67**  
Grade D

Pages crawled: 5   Passed: 25   Failed: 15   Critical: 2

## Category breakdown

Each category below is one facet of how findable this site is to search engines and AI answer engines. The score is how many of that category's checks pass; the text under each bar explains what the category covers and, if anything failed, exactly what is missing.

### Crawlability

90

7/8 ok

Can search engines and AI crawlers reach and fetch the site at all — robots.txt rules, sitemap presence, and server-level blocks.

**Missing:** 1 issue found in this category — see "Top fixes" below for full detail.

- llms.txt is present

### Indexing

87

3/4 ok

Whether crawled pages are actually allowed into the search index — noindex tags, canonical conflicts, and duplicate/thin-content signals.

**Missing:** 1 issue found in this category — see "Top fixes" below for full detail.

- Titles are unique across pages

### Metadata

85

6/7 ok

The title, meta description, and heading tags on each page — the copy search engines and AI answer engines quote back to users.

**Missing:** 1 issue found in this category — see "Top fixes" below for full detail.

- Each page has exactly one H1

### Content

31

1/4 ok

Depth and clarity of on-page content — enough real, specific text per page for a search or AI engine to judge relevance and extract an answer from.

**Missing:** 3 issues found in this category — see "Top fixes" below for full detail.

- Pages link internally
- Pages are not thin on content
- Pages use headings to structure content

### Structured Data

100

2/2 ok

Schema.org / JSON-LD markup (Organization, LocalBusiness, FAQ, Review, etc.) that lets machines read facts about the business directly, instead of guessing from prose.

**Nothing missing — every check in this category passes.**

### Social

100

2/2 ok

Open Graph and Twitter Card tags that control how the site's title, description, and image render when shared or cited in social apps and AI chat citation cards.

**Nothing missing — every check in this category passes.**

### Mobile

100

1/1 ok

Mobile usability basics — viewport configuration and responsive rendering, since most local and AI-referred traffic arrives on a phone.

**Nothing missing — every check in this category passes.**

### Security

100

1/1 ok

Baseline transport security (HTTPS) — a prerequisite for indexing, trust, and most modern browser/crawler behavior.

**Nothing missing — every check in this category passes.**

## Answer Engine Optimization

24

2/11 ok

AI answer-engine optimization: llms.txt, AI-crawler access (GPTBot, ClaudeBot, PerplexityBot), and other signals specific to being cited by ChatGPT, Perplexity, and Google AI Overviews.

**Missing:** 9 issues found in this category — see "Top fixes" below for full detail.

- FAQ or QA schema is present
- Content uses question-shaped headings
- Content is answerable (sufficient depth + lists)
- Article and author schema are present
- + 5 more

## Top fixes

Every failed check, most urgent first. Each item explains what was found ("What this means"), the exact change to make ("Fix"), and which pages it affects. Severity in parentheses tells you how much it's costing this site.

### FAQ or QA schema is present

HIGH (a major, direct hit to ranking or AI-citation odds) · aeo · weight 8

What this means: FAQPage/QAPage markup feeds answer engines ready-made Q&A pairs. No FAQ/QA content or schema detected.

[Fix: Mark up your FAQ section with FAQPage JSON-LD.](#)

[Learn more about this check](#)

### Content uses question-shaped headings

HIGH (a major, direct hit to ranking or AI-citation odds) · aeo · weight 7

What this means: Headings phrased as questions match how users query AI assistants. No question-phrased headings found.

[Fix: Add headings like "How does X work?" above their answers.](#)

### Content is answerable (sufficient depth + lists)

MEDIUM (a real gap worth closing this cycle) · aeo · weight 6

What this means: Engines prefer pages with enough text and scannable lists to quote. Mean words 0, lists 0.

[Fix: Aim for 300+ words and use lists for key facts.](#)

### Article and author schema are present

MEDIUM (a real gap worth closing this cycle) · aeo · weight 5

What this means: Article + Person markup attributes content for E-E-A-T and citation. Article: no, Author/Person: yes.

[Fix: Add Article JSON-LD with an author of type Person.](#)

[Learn more about this check](#)

### Content is extractable (paragraphs + lists/tables)

MEDIUM (a real gap worth closing this cycle) · aeo · weight 5

What this means: Engines extract best from well-formed paragraphs, lists, and tables. Mean paragraphs 0, lists+tables 0.

[Fix: Structure content into clear paragraphs, lists, and tables.](#)

### llms.txt is present for answer engines

MEDIUM (a real gap worth closing this cycle) · aeo · weight 5

What this means: llms.txt is the emerging standard manifest for LLM-friendly content.

[Fix: Generate and publish an llms.txt at your site root.](#)

[Learn more about this check](#)

### Organization schema is present

MEDIUM (a real gap worth closing this cycle) · aeo · weight 5

What this means: Organization markup builds entity identity that engines trust. No Organization schema.

[Fix: Add Organization JSON-LD with name, url, and logo.](#)

## llms.txt is present

MEDIUM (a real gap worth closing this cycle) · crawlability · weight 5

What this means: llms.txt curates the content you want answer engines to read.

[Fix: Generate an llms.txt manifest of your key pages.](#)

[Learn more about this check](#)

## Pages are not thin on content

MEDIUM (a real gap worth closing this cycle) · content · weight 4

What this means: Very low word counts read as thin content to engines. 2 thin page(s).

[Fix: Expand pages under ~200 words with substantive content.](#)

Affected: <https://vexnote.vercel.app/>, <https://vexnote.vercel.app>

## Each page has exactly one H1

MEDIUM (a real gap worth closing this cycle) · metadata · weight 4

What this means: A single H1 communicates the primary topic unambiguously.

[Fix: Use one H1 per page; demote extras to H2/H3.](#)

Affected: <https://vexnote.vercel.app/>, <https://vexnote.vercel.app>

## Titles are unique across pages

MEDIUM (a real gap worth closing this cycle) · indexing · weight 3

What this means: Duplicate titles dilute relevance and confuse engines. 1 duplicated title(s).

[Fix: Give each page a distinct <title>.](#)

## Breadcrumb structured data is present

LOW (minor polish, low urgency) · aeo · weight 3

What this means: BreadcrumbList markup clarifies site structure for engines. No breadcrumb schema.

[Fix: Add BreadcrumbList JSON-LD reflecting your navigation path.](#)

[Learn more about this check](#)

## Content has structured, extractable answers

LOW (minor polish, low urgency) · aeo · weight 3

What this means: Speakable markup or HowTo/QA structure yields voice/AI-ready answers. No speakable / HowTo / QA structure.

[Fix: Add Speakable or HowTo schema to highlight answer passages.](#)

## Pages link internally

LOW (minor polish, low urgency) · content · weight 3

What this means: Internal links spread authority and help discovery. Pages average fewer than one internal link.

[Fix: Add contextual internal links between related pages.](#)

## Pages use headings to structure content

LOW (minor polish, low urgency) · content · weight 2

What this means: Headings give content a skimmable, extractable structure. Some pages have no headings.

[Fix: Break long content into sections with H2/H3 headings.](#)
